

AI Broker Hackathon

Challenge description

QUANT COMPETITIONS · AMSTERDAM TECH WEEK · 18 JUNE 2026

Build the ultimate broker app on the Alpaca API. Design a user-first brokerage or trading experience on top of the Alpaca paper-trading API, using Lovable to go from idea to working prototype inside the timebox, in the spirit of a modern consumer bank like bunq. Pick a clear focus and execute it well rather than covering everything shallowly.

Date	18 June 2026, afternoon (Amsterdam Tech Week 2026)
Location	Amsterdam
Team size	4 to 5 per team
Build platform	Lovable is the recommended path; own stack (Python, Claude, other tools) allowed
Partners	Alpaca Markets (API), bunq (brokerage), Lovable (build)
Deliverable	A working build you present live from your own laptop, no repository required

The objectives

You are scored on eight objectives, each from 0 to 5, for a total out of 40.

1	Connected broker account: Alpaca paper account live	/ 5
2	Market View: live or recent prices	/ 5
3	Order ticket: place buy and sell paper orders via Alpaca	/ 5
4	AI-powered trade ideas, portfolio management, or other AI functionalities, either for trading, portfolio management, or investing	/ 5
5	Portfolio intelligence such as risk metrics or handy overviews	/ 5
6	Agentic AI trading agent	/ 5
7	Creativity: a unique feature outside this scope	/ 5
8	Explainability: a central file that describes how the features work and why they were added	/ 5

Timeline

Time	Session
12:30 to 13:00	Walk-in and check-in.
13:00 to 13:30	Grand opening and panel with bunq, Alpaca and Lovable, then team formation.
13:30 to 15:45	Build. Open build, no grading during it, so keep your build clean and demoable. US markets open at 15:30 Amsterdam time.
15:45 to 16:15	Build closes. Judges score every team on the eight objectives.
16:15 to 16:45	The top 4 teams pitch live.
16:45	Winners, prizes and drinks.

How judging and grading works

- You build freely until 15:45. There is no grading during the build, so focus on shipping a working, demoable product.
- At 15:45 hands come off keyboards. Judges then score every team on the eight objectives above, each from 0 to 5, for a total out of 40. Grading is done live at your laptop, so there is nothing to upload.
- The four highest objective totals go through to the pitches.
- From 16:15 to 16:45 the top 4 present live from their own laptop, up to 5 minutes each.
- Three jurors, two from the Alpaca team and one from bunq, each score your pitch from 1 to 10, for a total out of 30. The highest total wins.
- The objective total selects the top 4 but does not carry into the pitch score, so a strong pitch matters.

Using Lovable (free Pro Plan 1)

All participants get Lovable Pro Plan 1 (100 credits) free for the event. Redeem it before the end of the day, and do not share the code outside the event.

Discount code: COMM-AI-Q2CD

How to apply it:

- Go to lovable.dev.
- No account yet? Click "Get started" and create an account.
- Already have an account? Go to Settings, then Plans and Credits.
- Select Pro Plan 1 (100 credits) and choose the monthly plan.
- At checkout, enter the discount code above.
- Already on a paid account? Just create a new workspace to redeem it. You may be asked for payment details, but you have one month to cancel and can cancel as soon as it is activated.
